

Eastman Kodak Successfully Deploys Descartes' Visibility & Event Management Solution to Improve Delivery Productivity and Performance

WATERLOO, ONTARIO, December 13, 2005 — The Descartes Systems Group Inc. (Nasdaq: DSGX)(TSX: DSG), a leading provider of on-demand delivery management solutions and services for transportation, logistics, manufacturing, retail and distribution enterprises, today announced that Eastman Kodak Company (NYSE: EK), a leading provider of digital and film imaging systems, is improving its delivery productivity and performance by using Descartes' Visibility & Event Management™ solution and Global Logistics Network™ (GLN).

Descartes' Visibility & Event Management solution is an on-demand, web-based solution designed to work across enterprises, geographies and transportation modes. The solution provides a framework that allows users and their trading partners to monitor, measure, query and report on order and shipment information down to the line-item level. Descartes' Visibility & Event Management solution leverages the GLN - one of the world's largest multimodal networks of transportation and logistics services providers, and their customers.

Kodak's Americas Logistics Division uses Descartes' Visibility & Event Management solution to support deliveries to its key customers in the United States and to its manufacturing plants around the globe. Using Descartes' GLN and its connections to Kodak's global trading partners and logistics services providers, Kodak can have their regional and global supply chain event information delivered to a single centralized source. Kodak currently uses the GLN to manage over two million business documents a month including customer purchase orders, order changes, inventory replenishments worldwide, shipment statuses and internal warehouse receipts. The Visibility & Event Management solution then uses the information in these business documents to provide Kodak with visibility to the status of deliveries; and to measure, evaluate, and monitor delivery performance to its customers. This "scorecarding" helps Kodak proactively address delivery performance issues and reduce charge-backs from customers.

"Shipment visibility is critical for us to identify ways to operate our global supply chain more efficiently, and to maintain a high level of service to our customers," said Michael Ducey, Director, Americas Logistics, Eastman Kodak Company. "Descartes provides us with a single platform that consolidates and synchronizes information from across our supply chain and transforms it into key business metrics that allow our logistics organization to work together to resolve issues and improve our overall performance."

"Kodak has implemented a visibility solution of unparalleled scope and global reach, and we are thrilled to be able to continue to work with Kodak and its team of dedicated professionals," said Arthur Mesher, CEO of Descartes. "Roxana Ahmed, Project Manager for Kodak's implementation is a key member of the Steering Committee for Descartes' Global User Group, and we welcome her experience and feedback to help our current and future Visibility and Event Management customers improve their delivery performance and productivity using our solutions."
